

### Amendments to the Claims

Please cancel claims 1-12 without prejudice. Please add new claims 13-22 as shown below in the List of Claims.

### List of Claims

1-12 Canceled.

13. (New) A process for the production of an L-amino acid chosen from the group consisting of L-threonine, L-isoleucine, L-valine, L-methionine, L-homoserine and L-lysine comprising:
  - a) fermenting a bacterium comprising an overexpressed endogenous DNA sequence encoding the galactose-proton symporter protein in said bacterium, in a fermentation medium under conditions suitable for the production of said L-amino acid, wherein:
    - i) said bacterium is of the Enterobacteriaceae family;
    - ii) said galactose-proton symporter protein comprises the amino acid sequence of SEQ ID NO:4; and
    - iii) said L-amino acid is produced from glucose, saccharose, lactose, fructose, molasses, starch cellulose or from glycerine and ethanol;
  - b) allowing said L-amino acid to become enriched in said bacteria or said fermentation medium.
14. (New) The process of claim 13, wherein said galactose-proton symporter protein consists of the amino acid sequence of SEQ ID NO:4.
15. (New) The process of claim 13, wherein said DNA sequence encoding the galactose-proton symporter protein comprises the nucleotide sequence of SEQ ID NO:3.
16. (New) The process of claim 13, wherein said DNA sequence encoding the galactose-proton symporter protein consists of the nucleotide sequence of SEQ ID NO:3.
17. (New) The process of claim 13, wherein overexpression is achieved by increasing the copy number of said DNA or by operably linking said DNA to a promoter.

18. (New) The process of any one of claims claim 13-16, wherein said L-amino acid is L-threonine.
19. (New) The process of any one of claims 13-16, further comprising isolating said L-amino acid along with some or all of the constituents of said fermentation medium and/or the biomass in said fermentation medium.
20. (New) The process of claim 19, wherein said L-amino acid is L-threonine.
21. (New) The process of claim 13, wherein said microorganism overexpresses one or more genes selected from the group consisting of:
  - a) the thrABC operon coding for aspartate kinase, homoserine dehydrogenase, homoserine kinase and threonine synthase;
  - b) the pyc gene coding for pyruvate carboxylase;
  - c) the pps gene coding for phosphoenolpyruvate synthase;
  - d) the ppc gene coding for phosphoenolpyruvate carboxylase;
  - e) the pntA and pntB genes coding for transhydrogenase,
  - f) the rhtB gene which imparts homoserine resistance;
  - g) the mqo gene coding for malate:quinone oxidoreductase;
  - h) the rhtC gene which imparts threonine resistance;
  - i) the thrE gene coding for threonine export protein;
  - j) the gdhA gene coding for glutamate dehydrogenase;
  - k) the glk gene coding for glucokinase;
  - l) the hns gene coding for DNA binding protein HLP-II;
  - m) the pgm gene coding for phosphoglucomutase;
  - n) the fba gene coding for fructose biphosphate aldolase;
  - o) the ptsH gene coding for phosphohistidine protein hexose phosphotransferase;
  - p) the ptsI gene coding for enzyme I in the phosphotransferase system;
  - q) the crr gene coding for the glucose-specific IIA component;
  - r) the ptsG gene coding for the glucose-specific IIBC component;
  - s) the lrp gene coding for a regulator in the leucine regulon;
  - t) the csrA gene coding for the global regulator Csr;
  - u) the fadR gene coding for a regulator in the fad regulon;

- v) the *iclR* gene coding for a regulator in central intermediary metabolism;
- w) the *mopB* gene coding for the 10 KDa chaperone;
- x) the *ahpC* gene coding for the small sub-unit of alkyl hydroperoxide reductase;
- y) the *ahpF* gene coding for the large sub-unit of alkyl hydroperoxide reductase;
- z) the *cysK* gene coding for cysteine synthase A;
- aa) the *cysB* gene coding for the regulator in the *cys* regulon;
- bb) the *cysJ* gene coding for the flavoprotein in NADPH sulfite reductase;
- cc) the *cysI* gene coding for haemoprotein in NADPH sulfite reductase;
- dd) the *cysH* gene coding for adenylylsulfate reductase;
- ee) the *phoB* gene coding for the positive regulator PhoB in the *pho* regulon;
- ff) the *phoR* gene coding for the sensor protein in the *pho* regulon;
- gg) the *phoE* gene coding for protein E in the outer cell membrane;
- hh) the *pykF* gene coding for the pyruvate kinase I stimulated by fructose;
- ii) the *pfkB* gene coding for 6-phosphofructokinase II;
- jj) the *malE* gene coding for periplasmatic binding protein in maltose transport;
- kk) the *sodA* gene coding for superoxidedismutase;
- ll) the *rseA* gene coding for a membrane protein with anti- $\sigma^E$  activity;
- mm) the *rseC* gene coding for a global regulator in the  $\sigma^E$  factor;
- nn) the *sucA* gene coding for the decarboxylase sub-unit of 2-ketoglutarate dehydrogenase;
- 00) the *sucB* gene coding for the dihydrolipoyl-transsuccinase E2 subunit of 2-ketoglutarate dehydrogenase;
- pp) the *sucC* gene coding for the  $\beta$ -subunit of succinyl-CoA synthetase;
- qq) the *sucD* gene coding for the  $\alpha$ -subunit in succinyl-CoA synthetase;
- rr) the *adk* gene coding for adenylate kinase;
- ss) the *hdeA* gene coding for a periplasmatic protein with a chaperonin-like function;
- tt) the *hdeB* gene coding for a periplasmatic protein with a chaperonin-like function;
- uu) the *icd* gene coding for isocitrate dehydrogenase;
- vv) the *mgIB* gene coding for periplasmatic, galactose-binding transport protein;
- ww) the *lpd* gene coding for dihydrolipoamide dehydrogenase;

- xx) the aceE gene coding for the E1 component of pyruvate dehydrogenase complex;
  - yy) the aceF gene coding for the E2 component of pyruvate dehydrogenase complex;
  - zz) the pepB gene coding for aminopeptidase B;
  - aaa) the aldH gene coding for aldehyde dehydrogenase;
  - bbb) the bfr gene coding for the iron storage homoprotein;
  - ccc) the udp gene coding for uridine phosphorylase; and
  - ddd) the rseB gene coding for the regulator of sigmaE factor activity.
22. (New) The process of claim 13, wherein at least one gene in said microorganism is attenuated by having its expression reduced, said gene being selected from the group consisting of:
- a) the tdh gene coding for threonine dehydrogenase;
  - b) the mdh gene coding for malate dehydrogenase;
  - c) the gene product of the open reading frame (ORF) yjfA;
  - d) the gene product of the open reading frame (ORF) ytfP;
  - e) the pckA gene coding for the enzyme phosphoenol-pyruvate carboxykinase;
  - f) the poxB gene coding for pyruvate oxidase;
  - g) the aceA gene coding for isocitrate lyase;
  - h) the dgsA gene coding for the DgsA regulator in the phosphotransferase system;
  - i) the fruR gene coding for fructose repressor;
  - j) the rpoS gene coding for the sigma<sup>38</sup>-Factor;
  - k) the aspA gene coding for aspartate ammonium lyase; and
  - l) the aceB gene coding for malate synthase A gene.
